

Module code & Module Title

CC4057NP Introduction to Information Systems

Assessment weightage & Type

60% Group Coursework -1

Year& Semester

2025 Autumn

| Student's Name | London Met ID: |
|----------------------|----------------|
| Pawan Poudel | 25029136 |
| Krishna Gurung | 25029123 |
| Arjun Prasad Sharma | 25029084 |
| Mahammad Danish Ajaj | 25029126 |
| Bindu Adhikari | 25029096 |

Group: L1C2

Module Leader: Mr. Krishna Wagle

Assignment Submission Date: 2026-01-30

Declaration:

We declare that our coursework must be submitted through “My Second Teacher Nepal” which is online. We are aware that, we must submit this assignment before the deadline, any submission after the deadline is considered not submitted and will get a zero grade for the assignment. That is our responsibility to submit the assignment before the deadline by following all the rules, and regulations and taking plagiarism seriously.

1.Introduction

1.1 Introduction of Our Project:

Internet has become a very important part of the today's world and made the life of people more easy, faster and comfortable. It has changed the way of doing business too. E-commerce websites have suddenly appeared in recent days and catch the attention of people. Consumers are interested in it because they can shop for everyday products online anytime and from anywhere.

Our project involves developing an e-commerce website called EcoMart that will allow consumers to shop eco-friendly and sustainable products online anytime from anywhere easily. We used modern web technologies like HTML5, CSS3 and Java Script to deliver the best shopping experience to our customers.

This project lets us show our skills in developing websites using tools like HTML, CSS, JavaScript.

While building this website, we followed simple rules of good website designing. Our goal was to make website look good, smooth, easy to use no matter what device our customers are using.

The main objective of developing this website is to create simple and user-friendly online shopping platform using modern web technologies. This project aims to help us know how these modern technologies support the business activity. This project helps us to know our capacity and capabilities of applying scripting languages to web pages.

1.2 Goals

The main objective of our website is to promote eco friendly products that are safe for people and for the world also. The website goal is to inspire customers to use suatainable products in their daily lives, building a trust trough high-quality product. The website is also focused on giving knowledge to the customers about our sustainable products through blogs, making the shopping experience on the website internet fun and interactive through the use of our unique features.

Objectives

The objectives of this project are:

- Sell products that are safe for the human health and environment.
- Make sure that our site is easy navigate for our customers.
- Make the website responsive to different devices.
- Provide details for the products on the sites.
- Provide discount motivate the use of eco-friendly and sustainable products.
- Provide a quick and easy way to search the products on the site.
- Make sure that the website provides safe payment transaction system.
- To educate users about sustainability through informative blogs.
- To make online shopping fun and interactive using unique features and functionality.
- To enable fast and efficient product searching without wasting time.
- To ensure secure and safe online payment transactions.

1.3 Technologies used (HTML, CSS, JavaScript)

HTML (Hyper Text Mark-up LANGUAGE)

Figure 1: Html Logo

The structure of the web pages is created using HTML. In order for the browser to display the words and images on the page, we use tags to organize them. HTML is very important for ensuring that everything appears as it should on the website. In order to make a website, html is absolutely necessary. HTML has undergone many changes over the years. Our current version of HTML, HTML5, allows us to embed videos and other multimedia components on our website. We are able to make our websites more enjoyable to use and to view as a result. HTML5

is extremely useful for making modern websites more interactive and engaging, which is what HTML5 is all about. It makes HTML5 a great tool, for creating cool websites. When combined with CSS for styling and JavaScript for interactivity, HTML becomes the foundation for creating compelling user experiences. Mastering HTML is the first essential step in building functional, attractive websites(Developer: Mozilla, 2024).

Table 1:Html Tags

| HTML Tags | Description |
|------------------------------|--|
| <!DOCTYPE html> | defines the document is HTML document |
| <html> | root element which encloses all other elements |
| <head> | contains information about the page, title and metadata (data about data) |
| <title> | title for the HTML page which is shown in the browser's title bar |
| <body> | defines the main content of the page and it's a container for all the visible contents such as heading, lists. |
| <p> | defines a paragraph of an html document |
| | renders image on the webpage |
| <div> | Block-level element which is used to group large sections of contents (layout, sections) |
| | Inline element used to style or grouping small pieces of text within a line |
| | used as a line breaker |
| <header> | Acts as a container for introductory content or a set of navigation links |
| <nav> | Section that contains navigation links (menu). |
| <meta> | Defines metadata about an HTML document (such as charset, author, viewport) |
| <!-- ... --> | comment in HTML (not displayed in the browser). |
| | used within a list (or). |
| <footer> | Defines a footer for a document or section, usually containing copyright, links, or author information. |

Here is the structure of HTML that we used in our website:

```
<!DOCTYPE html>

<html>

  <head>

    <link rel="Icon" href="/Icons/EcoMart Title(1).png" type="image/x-icon"> <!-- Sets the title
picture for the webpage -->

    <title>Blog - EcoMart</title>

    <meta name="viewport" content="width=device-width, initial-scale=1"> <!--Adjusts layout
for different screen sizes-->

    <meta charset="UTF-8"> <!-- Sets character encoding to UTF-8 -->

    <link rel="stylesheet" href="EcoMart.css"> <!-- Links to external CSS file for styling -->

    <style> /*Internal CSS*/
      body{
        margin: 0px;
        padding: 0px;
        background-repeat: no-repeat;
        background-color: aliceblue;
        background-repeat: no-repeat;
```

```
background-size: cover;  
background-attachment: fixed;  
overflow-x: hidden;  
display: flex;  
flex-direction: column;  
min-height: 100vh;  
font-family: 'Trebuchet MS', 'Lucida Sans Unicode', 'Lucida Grande', 'Lucida Sans',  
Arial, sans-serif;  
}  
  
a{  
text-decoration: none;  
}  
</style>  
</head>  
  
<body>  
  <header>
```

CSS (Cascading Style Sheet)

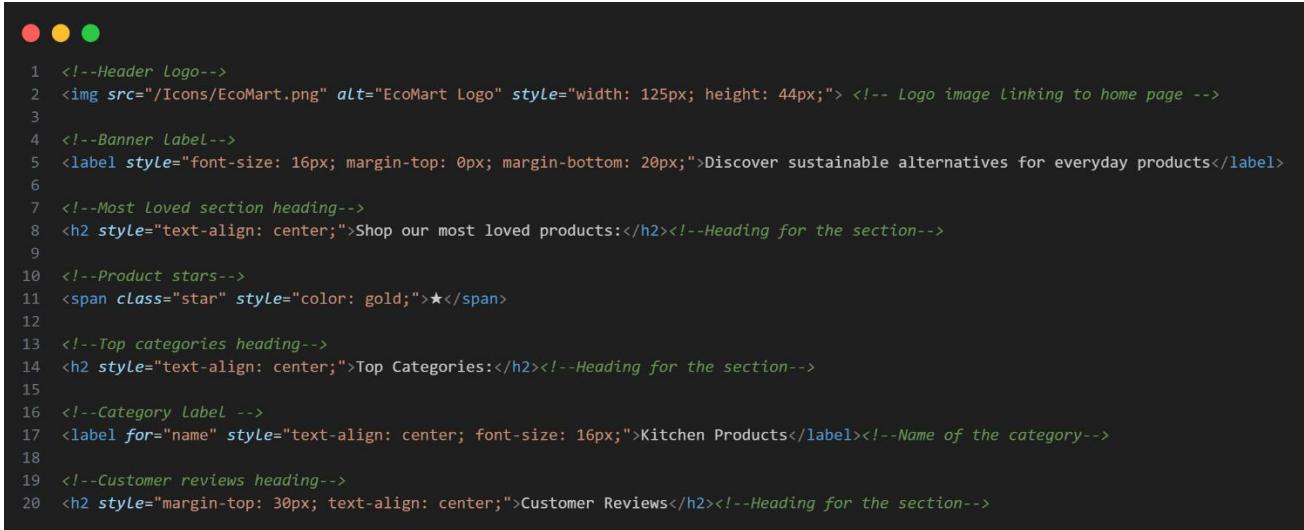

Figure 2: CSS Logo

CSS is something that makes the websites look better. It makes the web pages look good and pretty. CSS and HTML work together to ensure that everything on the web page looks good. CSS controls the colors, fonts, and the layout of the items on the web page. CSS also controls the spacing and the alignment of the items on the web page. CSS is very useful when you want to make changes to the website, and you do not have to change the content of the website; you only have to change the CSS code. CSS is like a designer for the websites, and it ensures that they look good and professional. CSS is something that makes the websites look better. CSS makes the web pages look good and pretty. CSS and HTML go hand in hand to make sure that everything on the web page looks good. CSS controls the colors, fonts, and the layout of the items on the web page. CSS also controls the spacing and the alignment of the items on the web page. CSS is very helpful if you want to make some changes to the website, and you don't need to change the content of the website; you just need to change the CSS code. CSS acts as the designer of the websites, making sure that the websites look good and professional (W3schools, 2023).

Inline CSS:

Using the style property, we can apply Inline CSS directly to a single HTML element. This method allows for quick and easy styling of specific elements, but as the number of elements and style grows, it can become difficult to maintain.

```

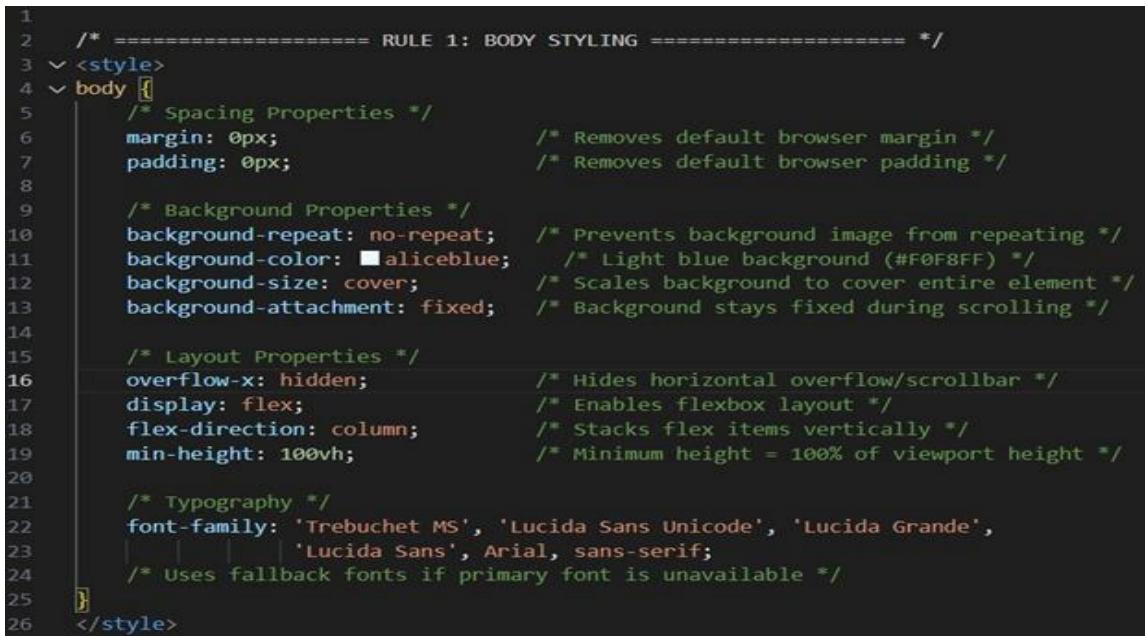

1 <!--Header Logo-->
2  <!-- Logo image linking to home page -->
3
4 <!--Banner Label-->
5 <label style="font-size: 16px; margin-top: 0px; margin-bottom: 20px;">Discover sustainable alternatives for everyday products</label>
6
7 <!--Most Loved section heading-->
8 <h2 style="text-align: center;">Shop our most loved products:</h2><!--Heading for the section-->
9
10 <!--Product stars-->
11 <span class="star" style="color: gold;">★</span>
12
13 <!--Top categories heading-->
14 <h2 style="text-align: center;">Top Categories:</h2><!--Heading for the section-->
15
16 <!--Category Label -->
17 <label for="name" style="text-align: center; font-size: 16px;">Kitchen Products</label><!--Name of the category-->
18
19 <!--Customer reviews heading-->
20 <h2 style="margin-top: 30px; text-align: center;">Customer Reviews</h2><!--Heading for the section-->

```

Figure 3: Inline CSS

Internal CSS:

Internal CSS is defined within the head section of an HTML document under `<style>` element. A website with multiple pages becomes difficult to maintain consistent design when using internal CSS, but this approach works well for styling various elements on one webpage. A CSS sheet within the HTML page may be utilized if it has a unique style.

```

1  /* ===== RULE 1: BODY STYLING ===== */
2  <style>
3  <body>
4  {
5      /* Spacing Properties */
6      margin: 0px;           /* Removes default browser margin */
7      padding: 0px;          /* Removes default browser padding */
8
9      /* Background Properties */
10     background-repeat: no-repeat;    /* Prevents background image from repeating */
11     background-color: #aliceblue;    /* Light blue background (#F0F8FF) */
12     background-size: cover;        /* Scales background to cover entire element */
13     background-attachment: fixed;   /* Background stays fixed during scrolling */
14
15     /* Layout Properties */
16     overflow-x: hidden;           /* Hides horizontal overflow/scrollbar */
17     display: flex;               /* Enables flexbox layout */
18     flex-direction: column;       /* Stacks flex items vertically */
19     min-height: 100vh;           /* Minimum height = 100% of viewport height */
20
21     /* Typography */
22     font-family: 'Trebuchet MS', 'Lucida Sans Unicode', 'Lucida Grande',
23     |           |           'Lucida Sans', Arial, sans-serif;
24     |           /* Uses fallback fonts if primary font is unavailable */
25 }
26 </style>

```

Figure 4: Internal CSS

External CSS:

External CSS is the method of styling the page by writing the CSS rules in a separate file (with a .CSS extension) and linking the file to the HTML document through the <link> element in the head of the HTML page. One advantage to using external CSS is that it allows for using the same CSS file on multiple web pages, ensuring that all of the web pages have the same design, which in turn makes it easier to update and maintain multiple web pages. Another benefit of external CSS is that it helps to keep the HTML content and the style of the HTML separate, which makes it easier to read the code, and it minimizes the amount of redundancy because the external CSS can be referenced from any web page on the website. External CSS is typically best for large-scale websites and professional projects; however, it can slow down the loading process (as it must be downloaded) when there are several multiple CSS files in use.

```
1  /* ===== HEADER STYLES ===== */
2  header {
3      display: flex;
4      justify-content: space-between;
5      align-items: center;
6      padding: 15px 30px;
7      background-color: #2d5016;
8      color: white;
9  }
10
11 .wel {
12     font-size: 20px;
13     font-weight: bold;
14 }
15
16 .comp {
17     display: flex;
18     gap: 25px;
19 }
20
21 .comp a {
22     color: white;
23     font-size: 16px;
24     transition: color 0.3s;
25 }
26
27 .comp a:hover {
28     color: #90ee90;
29 }
30
31 .logreg {
32     display: flex;
33     gap: 15px;
34 }
```

Figure 5: External CSS

JavaScript

Figure 6: JavaScript Logo

JavaScript is really useful for programming. It makes websites more fun for people who use them. It is very good at making websites interactive, for people who use them. This website is more fun to use and be familiar with. JavaScript is really useful for the people who make the website because it lets them make changes to the website. JavaScript does things that HTML and CSS cannot do by themselves. The good thing about it is that it works in a web browser, which people use all the time every day. It is very helpful because of its unique features such as versatility, text-based programming language primarily used to make web pages and applications dynamic and interactive in order to make the website better, for people who use it. The Document Object Model and JavaScript work together to make sure the website is nice to use. This means you do not need any programs on your computer to use JavaScript. You can make things like phones or servers, with JavaScript. JavaScript is different now than it used to be. The Document Object Model and JavaScript have been improved over time. JavaScript has gotten features that make it easier to use and more flexible. The Document Object Model and JavaScript are still changing. It is because of this that JavaScript is still very important, and any developer should know how to use it (Developer Mozilla, 2023).

JavaScript code used in our website:

```

1  document.addEventListener('DOMContentLoaded', function() {
2      const items = document.querySelectorAll('.item');
3
4      items.forEach((item) => {
5          const img = item.querySelector('.itemImage');
6          if (!img) return; // Skip if no image found
7
8          const dataImages = item.dataset.images; // Get the data-images attribute
9          if (!dataImages) return; // Skip if no data-images attribute
10
11         const originalSrc = img.src;
12         let imageArray = [];
13
14         // Try to parse as JSON array, otherwise treat as single image
15         try {
16             imageArray = JSON.parse(dataImages);
17             if (!Array.isArray(imageArray)) {
18                 imageArray = [dataImages];
19             }
20         } catch(e) {
21             imageArray = [dataImages];
22         }
23
24         let currentIndex = 0;
25         let cycleInterval;
26

```

Figure 7: JavaScript code

1.4 Verdict

Lastly, we are glad that the project on EcoMart e-commerce website has been completed successfully because it has accomplished the original objectives of the assignment. We were able to create a meaningful and engaging shopping experience using HTML, CSS, and JavaScript to build an effective and functional online shopping platform to encourage people to buy sustainable and eco-friendly products. During the implementation process, we made sure to keep our code clean and well-structured with zero errors to ensure easy and hassle-free functionality and usability. The significance of this project is immense because it has helped enhance our web development skills significantly while also allowing us to create awareness about sustainability and responsible consumption practices in society. At the same time, it has used technology to make a significant contribution to a greener and cleaner future with a meaningful shopping experience.

2. Documentation: Discussion and Analysis

Initially, this project was somewhat difficult for us because we had to allocate tasks to our group members and also decide which software to use. By working in a group and putting in extra effort, we were somehow able to overcome this difficulty. We did not merely concentrate on basic coding for our project; instead, we browsed through a number of websites to obtain ideas about how to design a complete website. The slideshow tutorials and classes taught us a lot about web design. During our project, we learned a number of things and enhanced our skills to a great extent on web development. Software that our teachers and seniors suggested to us made our task easier. Balsamiq helped us create wireframes easily due to its user-friendly interface. Through this project, we got practical experience in web development.

2.1 Selected text editor

VS Code

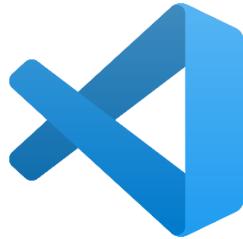

Figure 8: VS Code Logo

Visual Studio Code is an editor for code that is really good at what it does. You can use it from your computer and it works on Windows, macOS and Linux. It already knows how to work with JavaScript, TypeScript and Node.js. You can also use it with languages like C++ and C#. It works with things, like Unity. You just need to add some parts to make it work with these things. Visual Studio Code is easy to use. You can make it do more things by adding these extra parts. VS Code has a great Command Line Interface. This Command Line Interface in VS Code is very useful because it lets you decide how you want to use VS Code. You can pick the files you want to start with in VS Code add extensions to VS Code or change the languages you see when you start VS Code. You can also pull code changes from the Git repository. Push your code changes

to the Git repository. The Git support is really useful, for your code changes. Visual Studio Code is a great lightning-fast source code editor, and it is compatible with several hundred languages. If your needs pertain to bracket matching, syntax coloring, box selection, snippets, and auto-indenting, then Visual Studio Code would be your best editor (Arora, 2020).

2.2 Wireframe development tool

Balsamiq

Balsamiq is a graphical user interface that is used as a wireframe. It allows for the quick sketching of interfaces. Balsamiq was created in 2008 by Peldi Guilizzoni. It has managed to gain popularity, especially due to its sketch wireframe tool, which allows for feeds back on usability and not on aesthetics. The greatest advantage that Balsamiq has is that it can facilitate simplicity in terms of quickly sketching interfaces that can facilitate quick discussion without the use of too much time on high-fidelity designs and actual development. Balsamiq is available in two forms: it can be used as software that can be accessed via the cloud, referred to as Balsamiq Cloud, or as a plugin for Google Drive, Confluence, and Jira.

However, the tool that particularly calls attention as a wireframing application for immediate low-fi designs that encourage functional feeds back for the early stages of requirement validation is Balsamiq. Though this tool may be very limited in terms of high-fi designs, for early stages of designs, especially within UI/UX training, understanding the concept of a sketch-based workflow, feeds back, and a simple layout strategy to execute a user-focused design, Balsamiq particularly calls attention for immediate low-fi designs(Suresh, 2025).

Figure 9: Balsamiq Logo

We used Balsamiq in the planning for the EcoMart website project to create the wireframe designs. It helps in the development of a clear, simple visual layout of each Webpage by just dragging and placing header, navigation bar, image, button, product section and text area

elements. Using Balsamiq let us focus on the structure and functionality of the website instead of the detailed design or color. The strong idea was how the user would navigate through the site and how the content would be laid out on every page. This tool was also utilized to make quick changes from team discussions and feedback, hence saving some time in development. Overall, Balsamiq helped us arrange the thoughts, pages were kept consistent, and transitioned smoothly from planning into coding.

2.3 Individual Page Documentation

Header:

a. Explanation of contents

The Header consists of two sections. The first section starts with a “Welcome to EcoMart” message at the top left corner followed by navigation links to the Blog page, About Us page, Login Page and Register Page. The second section consists of the store logo which acts as a navigation link to the home page. It is followed by two navigation links i.e. Home page and Products page. The second section contains a search bar in the middle to search for specific products or similar products and at the right side, two icons reside which act as a hyper link to the Wishlist and Cart page.

b. Screenshot of wireframe:

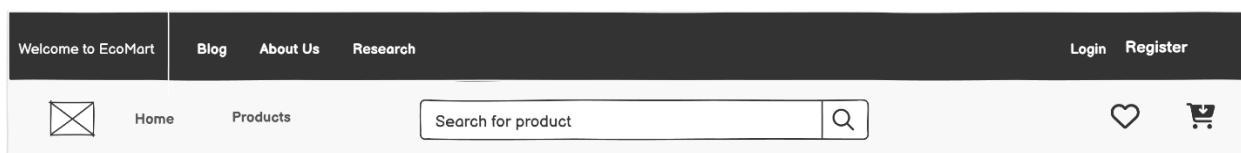

Figure 10: Header Wireframe

c. Screenshot of final page:

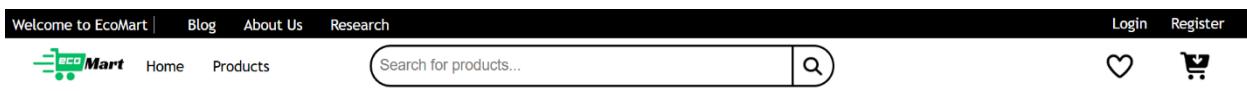

Figure 11: Header Section

Footer:

a. Explanation of contents

The Footer Section provides navigation links for the customer pages, informational pages, and social media connections along with the store logo. It also displays a copyright message at the bottom of the page.

b. Screenshot of wireframe:

Figure 12: Footer Wireframe

c. Screenshot of final page:

Figure 13: Footer Section

Home Page:

a. Explanation of contents:

The Home Page introduces EcoMart and communicates its eco-friendly purpose. It starts with a Hero Section displaying an environmental message that encourages users to reduce plastic use and choose sustainable products. The Featured Products Section highlights popular eco-friendly items with images, prices, discounts, ratings, and stock information to attract user interest. The “Top Categories” Section groups products into Kitchen, Personal Care, Lifestyle, and Home & Cleaning, allowing easy navigation through the website. The “Customer Reviews” Section shows user testimonials to build trust and credibility. The “Our Story Section” explains EcoMart’s mission as a student project focused on sustainability and responsible shopping.

c. Screenshot of final page:

The screenshot displays the homepage of EcoMart, an e-commerce platform for sustainable products. The header includes a navigation bar with links to Welcome, Blog, About Us, Research, Login, and Register. A search bar is also present. The main content area features a central callout box with the text "This year, take small steps toward using less plastic" and a "Shop Now" button. Below this, there's a section titled "Shop our most loved products:" featuring four product cards: "Organic Cotton Face Towels" (Rs.1120), "Castile Soap-Natural All-Purpose Cleaner" (Rs.190), "A5 Eco-friendly notebook" (Rs.650), and "Refillable Shampoo and Conditioner Bottles" (Rs.130). To the right of the fourth card is a green circular arrow icon. Further down, there's a "Top Categories:" section with four categories: Kitchen Products, Personal Care Items, Lifestyle products, and Home & Cleaning Products, each with a "See Products" button. A yellow "Customer Reviews" section follows, containing a testimonial from Johnny Joestar and a five-star rating. The bottom section, "Our Story," provides information about the company's mission and values, ending with a copyright notice: "Copyright © 2026 Ecomart Store. All Rights Reserved."

Product Page:

a. Explanation of contents

The Product page consists of the available items in our warehouse. Each item is in their own category under their own heading i.e. Personal care items, Lifestyle products, Kitchen items and Kitchen & Cleaning products. The item box displays the front image of the product along with its name, ratings, final price, original price and current discount rate. The items display multiple pictures in an interval of 1.5 seconds upon the cursor hovering above the item box. Each category has their own set of buttons that are used to slide between the set of items. The slide can only contain 5 items at a time and the set can only be changed after pressing the left or right button to change the index of the slide.

Wishlist Page:

a. Explanation of contents.

The Wishlist page consist of the items that the user has saved so that he or she could buy it in the near future. Each item box displays the front image of product that is saved along with content like item name, item description, ratings, final price, original price and discount rate. A vertical line divides the item contents and the “move to cart” and “remove” buttons. The “move to cart” button moves the selected product to the cart page where consumers may purchase the item. The “remove” button removes the selected product from the Wishlist page. The user can add as many products to the Wishlist page as he or she wishes.

Figure 23: Wishlist Page

Cart Page:

a. Explanation of contents

The Cart page consist of the items that the user plans to purchase. It is similar to the Wishlist page. It contains similar elements like image of product, name of product, description of product and its price. But it also has its own unique elements like the product filter and the price calculator. The “Product filter” filters the items based on its categories and displays it. The price calculator calculated the total price of every product including the delivery charges and tax rate for each item. The consumers also have the option to increase the number of specific items they can purchase which also contributes to calculate the final amount during purchase. The consumers also have the option to remove an item from their cart in case they ever change their mind.

Conclusion

Eco-friendly living is not just a trend, but a responsibility. By making small changes in our daily habits, supporting sustainable products, and embracing technology to reduce our impact, we can create a healthier planet. Every mindful choice counts, and together we can build a greener future for generations to come.

About Technology

It is a fact that in this modern era, almost all occupational areas are changing swiftly. It cannot be refuted that technology is the cause of the biggest revolution of this modern period. In this modern era, technology has become an integral part of all areas.

Figure 30: Blog Page Pop-Up

About-Us Page:

a. Explanation of contents

The About-Us page gives a brief in-sight to our team and our belief. The first section of the page gives the consumer a brief in-sight to our belief and our mission that drives this store. It is followed by a team section where a brief introduction of our team is displayed on screen which contains the photo of the individual, their role and a description which best describes them followed by a “View Portfolio” button which displays a pop-up containing the portfolio of each individual member. The final section consists of a feedback form where consumers can contact with the developers and give their feedback and opinion.

Research Page:

a. Explanation of contents

The Research Page contains a full-page detail about each reference we took to create the website. Each section is dedicated to one web page. It contains visual comparison which displays the picture of the web page we took reference from versus how we used that reference on our own web page. It is followed by a container providing a link to the website along with reason to why we referenced this website. Then, it is followed by two containers which show the similarities and differences of our web pages on text form. And at the end, a container displays what improvements we made to our web page in text form.

b. Screenshot of wireframe:

The wireframe shows a two-page comparison interface for EcoMart. The top navigation bar includes 'Welcome to EcoMart', 'Blog', 'About Us', 'Research' (selected), 'Login', and 'Register'. Below the navigation is a header with a logo, 'Home', 'Products', a search bar ('Search for products.....'), a magnifying glass icon, a heart icon, and a shopping cart icon.

 EcoMart

Research & Website Comparison

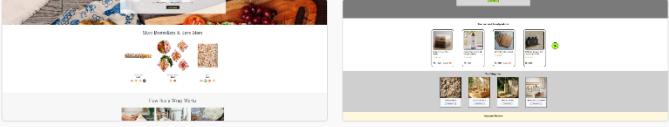

Comprehensive analysis of sustainable e-commerce websites and detailed comparisons of all EcoMart pages

1. HOME PAGE

Comparison with Beeswrap.com

Visual Comparison

Beeswrap (Reference) **EcoMart Home Page**

Reference Website: <https://www.beeswrap.com/>
Why Referenced: Leading eco-friendly brand with excellent banner design, product showcasing and sustainability messaging. Strong focus on visual storytelling and customer testimonials.

Similarities

- Both websites focus on eco-friendly/sustainable products.
- Both have top navigation or products showcase features.
- "Shop Now" CTA (a visual queue (a clickable button or link)) buttons both have same design.
- Both include customer reviews/brand story.

Differences

- Beeswrap is a fully functional in cart, checkout, backend and uses databases.
- Our website is a static website(HTML/CSS) Basics of Javascript only) no real cart logic.
- Beeswrap has professional UI/UX designs, filters, and accessibility.
- Navigation: EcoMart has search bar in header; Beeswrap has top navigation only

Improvements Made

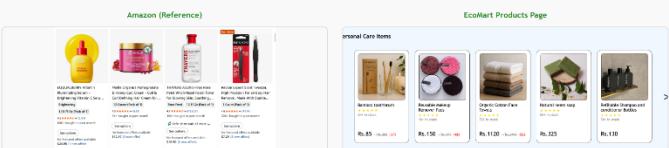

- Implemented product image with hover slider.
- Clear top categories section and link them to their own category.
- Well structured and commented HTML.
- Better color contrast for WCAG compliance(WCAG compliance means making a website easy to use for everyone, including people with disabilities)

2. PRODUCTS PAGE

Comparison with Amazon.com

Visual Comparison

Amazon (Reference) **EcoMart Products Page**

Reference Website: <https://www.amazon.com/>
Why Referenced: Industry-leading e-commerce platform with optimized product discovery, filtering, sorting, and efficient catalog organization. Gold standard for e-commerce UX.

Similarities

- Both websites shows products image, rating stars, discount and price.
- Both have Add to Cart / Buy Now / Wishlist buttons which helps to buy products.
- Both focus on helping users decide before buying.
- Both using clear call-to-action buttons(means that buttons that guide users clearly to the next action.)

Differences

- Amazon uses a fully dynamic e-commerce system (real cart, checkout, user account, backend and other features and technologies).
- Our site is static (HTML, CSS&JS only), no real purchase flow which doesn't have any backend features. It's just a sample of a website.
- Amazon has detailed descriptions, reviews, delivery & return information which helps users to easily filter and read all the information.
- Our website has limited products and details.

Improvements Made

- Added Images cycling on product hover for multiple views.
- Implemented category carousels for easier navigation.
- Better discount display in red color with percentage savings.
- We have implemented well-structured and readable HTML code.
- Added sustainability badges/labels for eco-products.
- Good foundation for adding backend later.

Figure 39: Final page of the Research page1

3. BLOG PAGE

Comparison with EcoMart.app

Visual Comparison

Reference Website:
<https://ecomart.app/>
Why Referenced: Excellent content organization, engaging card-based layout, clear visual hierarchy, and effective sustainability education through blog content.

| | |
|---|---|
| <p>Similarities</p> <ul style="list-style-type: none"> Both websites use eco-friendly, sustainability focused blog pages specially about the Impact of technology in modern era. Both websites use blog cards with images and contain title Functional attractive ness of both websites encourages users to read full content Both support brand awareness and education about the technology. Both websites follow a clean, minimal layout design. | <p>Differences</p> <ul style="list-style-type: none"> EcoMart loads blogs dynamically (CMS / backend) logics. Our blog is static (HTML + CSS + JS only) Referenced EcoMart site opens separate blog pages Our site opens contents using modal pop-ups using javascript. Referenced EcoMart site following WCAG accessibility standards. |
|---|---|

Improvements Made

- We have implemented smooth modal animations
- We have added conclusion section for better content closure.
- Improved card hover effects with elevation effect.
- Strong educational content.
- Enhanced modal closing functionality (click outside)
- We have implemented proper image optimization.

4. ABOUT US PAGE

Custom Design with Professional Standards

Visual Comparison

Reference Website:
<https://hufffec.com/>
Why Referenced: Created a unique About Us page combining best practices from tech companies, featuring team portfolios, interactive modals, and feedback forms for better user engagement.

| | |
|---|--|
| <p>Similarities</p> <ul style="list-style-type: none"> Both websites introduces brand mission and values clearly. Both have team member profiles with images Have included feedback/contact form Showing each and every member of team contact information Showing individual skills and experience in tech and individual. | <p>Differences</p> <ul style="list-style-type: none"> Buffer sites are dynamic; ours is static. Have team cards lift up with shadow on hover; smooth 0.4s transition Professional sites have polished design, responsive grids, smooth animations; Our website is simpler. Modals in our page is popup-based. Buffer sites often use dedicated profile pages which is professional. Feedback Form has custom styling inputs with focus states and submit button. |
|---|--|

Improvements Made

- We have Implemented interactive modals for team profiles.
- We have implemented clear feedback form with alerts.
- We have implemented organized header, navigation, and footer.
- We have implemented lean HTML with comments for readability.

Figure 40:Final page of the Research page2

5. LOGIN PAGE

Custom Authentication Design

Visual Comparison

| | | |
|--|---|---|
| Standard Login (Reference)  |  | EcoMart Login Page  |
|--|---|---|

Reference Website: <https://dribbble.com/>

Why Referenced: Secure and user-friendly authentication page with background imagery, form validation, "Remember Me" checkbox, Google Authentication option, and password security.

Similarities

- Both sites welcome the user with a friendly heading.
- Both sites have email and password fields.
- Both sites offer alternative login options (e.g. Google or register).
- Both sites provide links to register for new users who want to visit the site.
- Both displaying the brand logo clearly with the background image .

Differences

- Design of Dribble page looks modern and polished but our page is basic.
- Responsiveness of Dribble works well on all device but our page is less responsive comparing to dribble.
- Validation of the Dribble shows errors instantly; Our page doesn't check inputs yet.
- Accessibility of the Dribble supports keyboard & screen readers but our page doesn't support such features.
- Interactions of Dribble has hover effects and animations but our page is static.

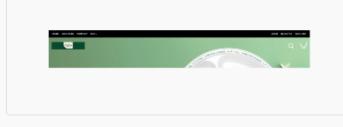

Improvements Made

- We have implemented clear "New here? Register" link.
- We have implemented background image and flex layout for center alignment.
- We have implemented simple and readable HTML structure with comments.
- Password field masking for security

6. HEADER SECTION

Design of Header Section

Visual Comparison

| | |
|---|--|
| Standard Header (Reference)  | EcoMart Register Page  |
|---|--|

Reference Website: <https://ecomart.com>

Why Referenced: Complete user registration flow with email verification, password confirmation, terms acceptance and alternative registration methods.

Similarities

- Both websites have logo on the top left linking to Home.
- Both sites include main navigation links (Home, Products, Blog, About, Research wishlist and cart icons as well.).
- Both sites have Login/Register buttons.
- Both have a search bar for products.

Differences

- Reference site has modern styling, spacing, and hover effects but our header is simpler.
- Reference EcoMart header adjusts smoothly on all screen sizes but our site has basic responsiveness.
- Reference EcoMart site may include dropdowns, animations, and sticky behavior but our header is static.
- Accessibility of the Reference Ecomart header likely uses ARIA roles and keyboard navigation but our header lacks full accessibility support.

Improvements Made

- We have implemented two-level header for navigation clarity.
- We have implemented search bar with button.
- We have included wishlist and cart icons for quick access.
- We have structured HTML with clear comments for proper readability.

Figure 41:Final page of Research page

Login Page:

a. Explanation of contents

The Login page is the place where users can login to their account. The main body for the login form is placed in the middle of the screen between two empty spaces which display a part of the background image. In the main body, the store logo resides at the top-left of the main body which also acts as a navigation link to the home page. It is followed by a “Welcome back” message to customers who are there to login to their account. It is followed by the Login form. The consumer also has the option to login using their google account. If the consumer doesn’t have an account, then he or she has the option to go to the Register page.

b. Screenshot of wireframe:

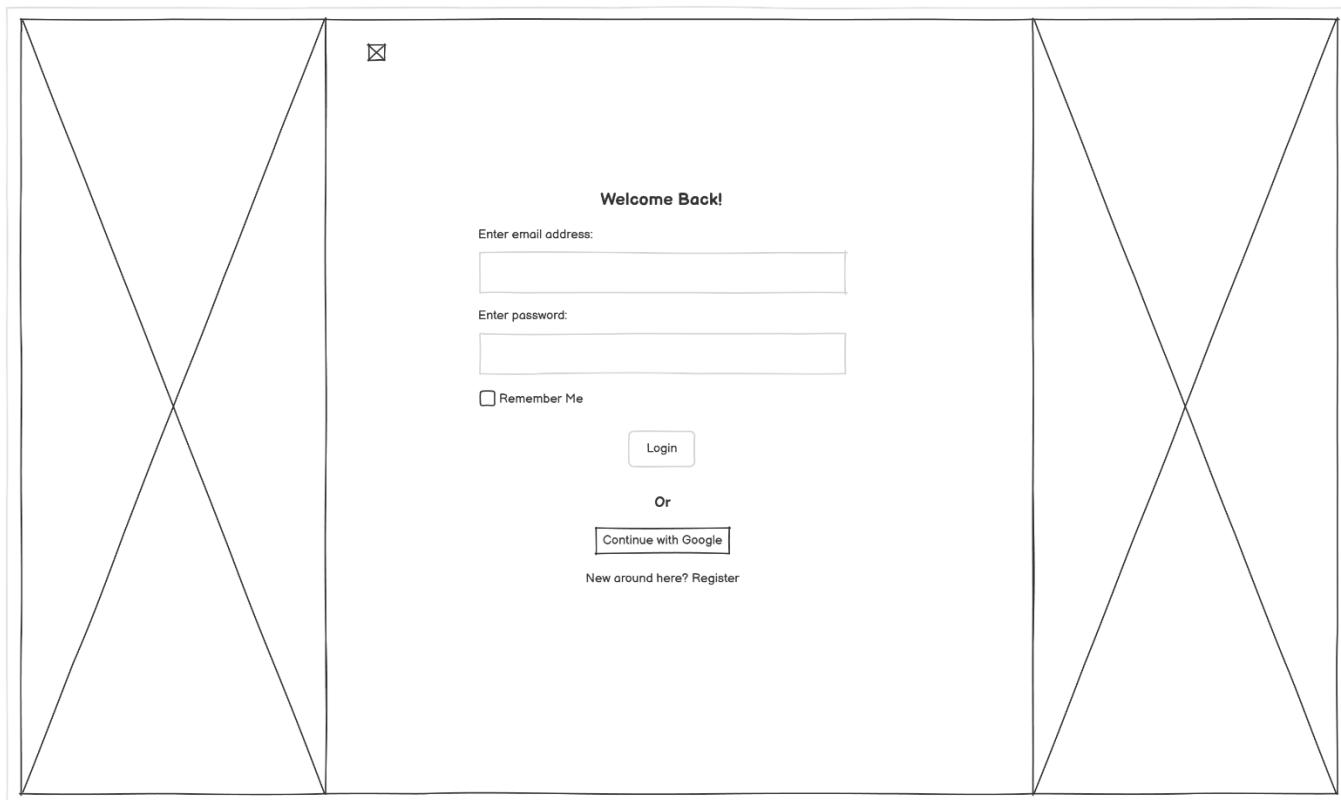

Figure 42:wireframe of Login page

c. Screenshot of final page:

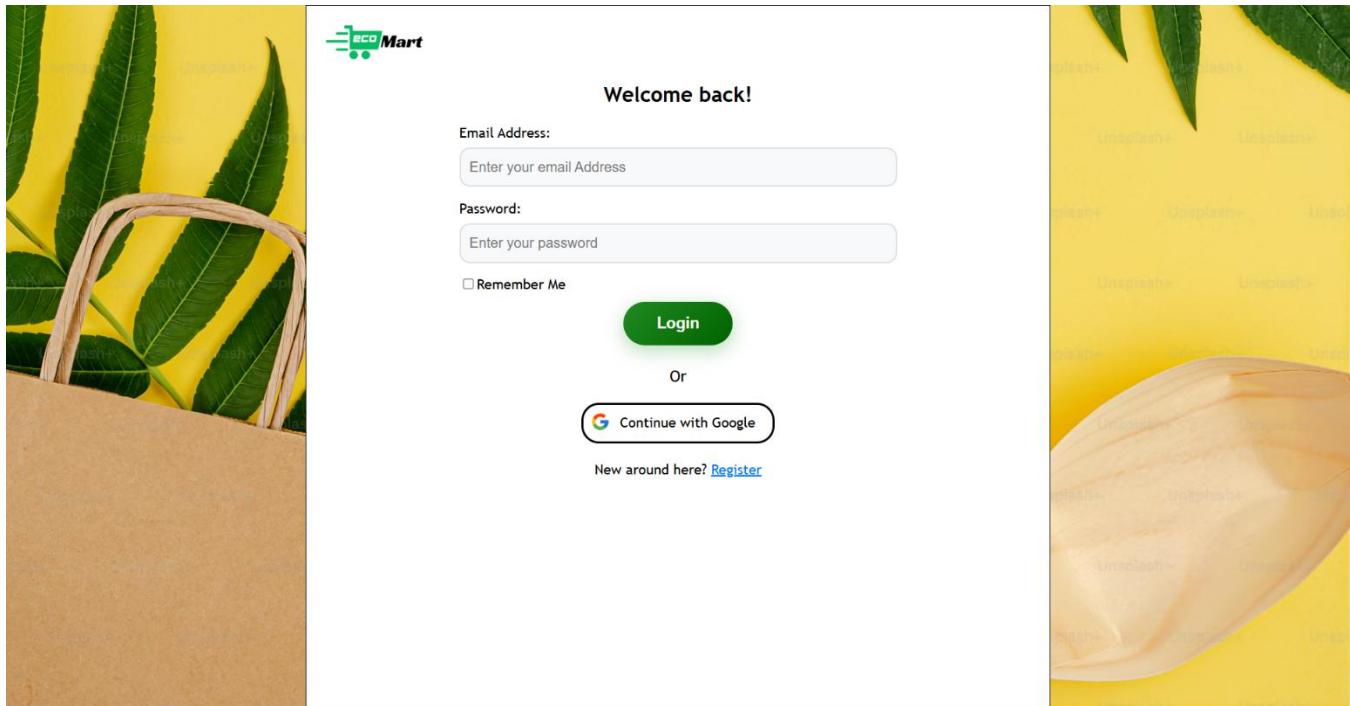

Figure 43: Final page of the login

Register Page:

a. Explanation of contents

The Register page is the place where users can register their account. The main body for the register form is placed in the middle of the screen between two empty spaces which display a part of the background image. In the main body, the store logo resides at the top-left of the main body which also acts as a navigation link to the home page. It is followed by a “Welcome to EcoMart” message to customers who are creating an account for the first time. A subtitle is displayed under the “Welcome” message. It is followed by the Register form. The consumer also has the option to register using their google account. If the consumer has an account already then, he or she has the option to go to the Login page.

b. Screenshot of wireframe:

The wireframe shows a registration form titled "Welcome to EcoMart". It includes fields for Email Address, Username, Create password, and Re-enter password. There are checkboxes for "Remember Me" and "I have read and agree to the Privacy Policy". A "Register" button is at the bottom, followed by an "Or" link and a "Continue with Google" button. A "Login" link is also present.

3. Testing

3.1 Test-1: Internal Link

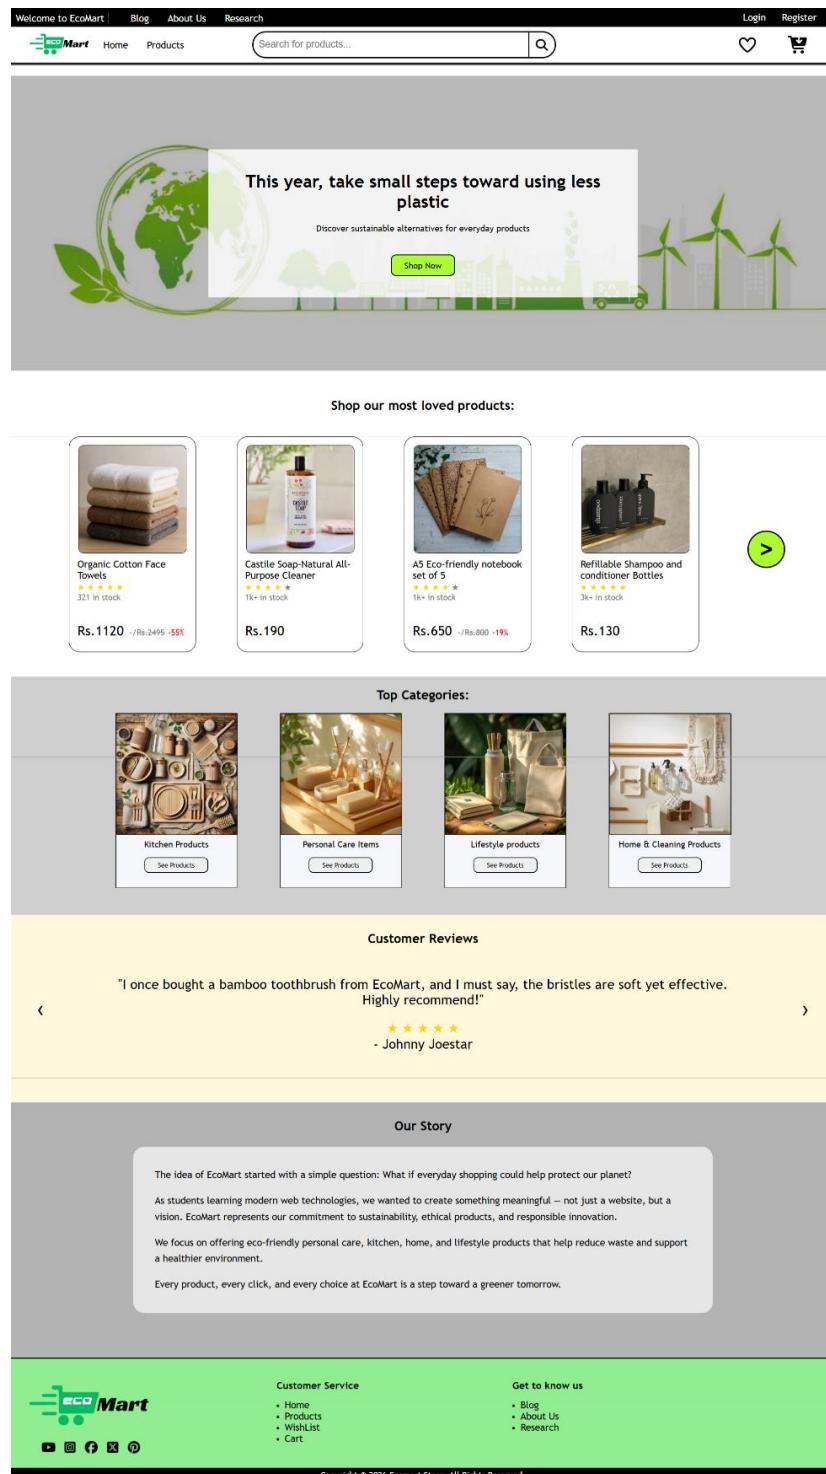

Figure 46: Before testing the home page

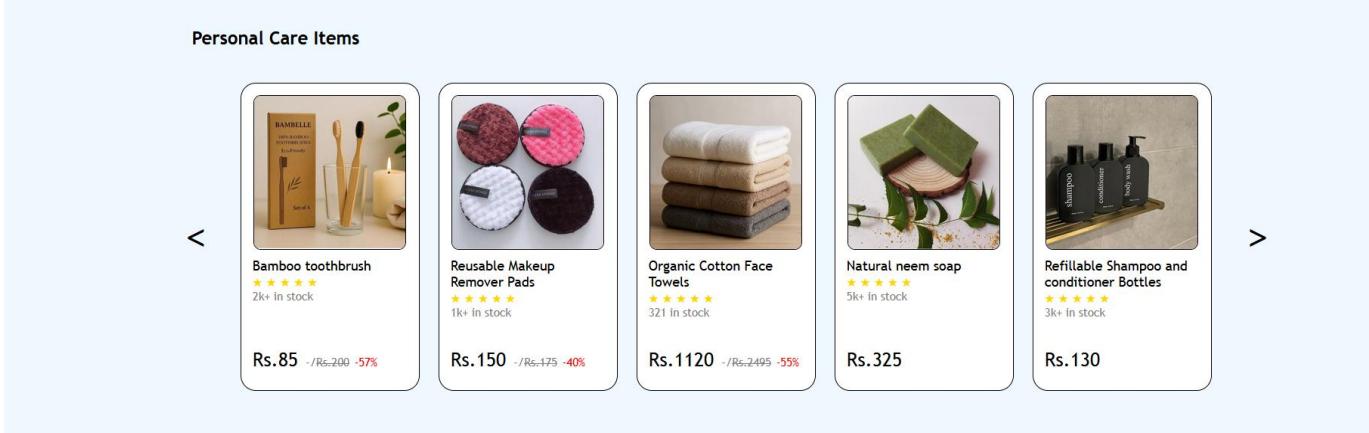

Figure 47: After Testing Home page reached to product page

Table 2: Internal link

| | |
|-----------------|--|
| Objective | To verify that all internal navigation links correctly redirect users to the intended pages within our website. |
| Action | Clicking on the "Products" link in the main navigation header from the Home page. The navigating link reached to product page. |
| Expected Result | The browser should navigate to the Products page (Products-EcoMart.html) without errors, displaying the product catalog with different categories (Personal Care, Kitchen Items, Lifestyle, Home & Cleaning) with proper functioning of the hover effects as well. |
| Actual Result | Successfully navigated to the Products page. All product categories loaded correctly with actual images, prices, and discount information all are visible on the page. |
| Result | Internal linking functions works successfully. |

3.2 Test-2-External Link

Figure 48: Screen shot of the footer section highlighting Instagram icon

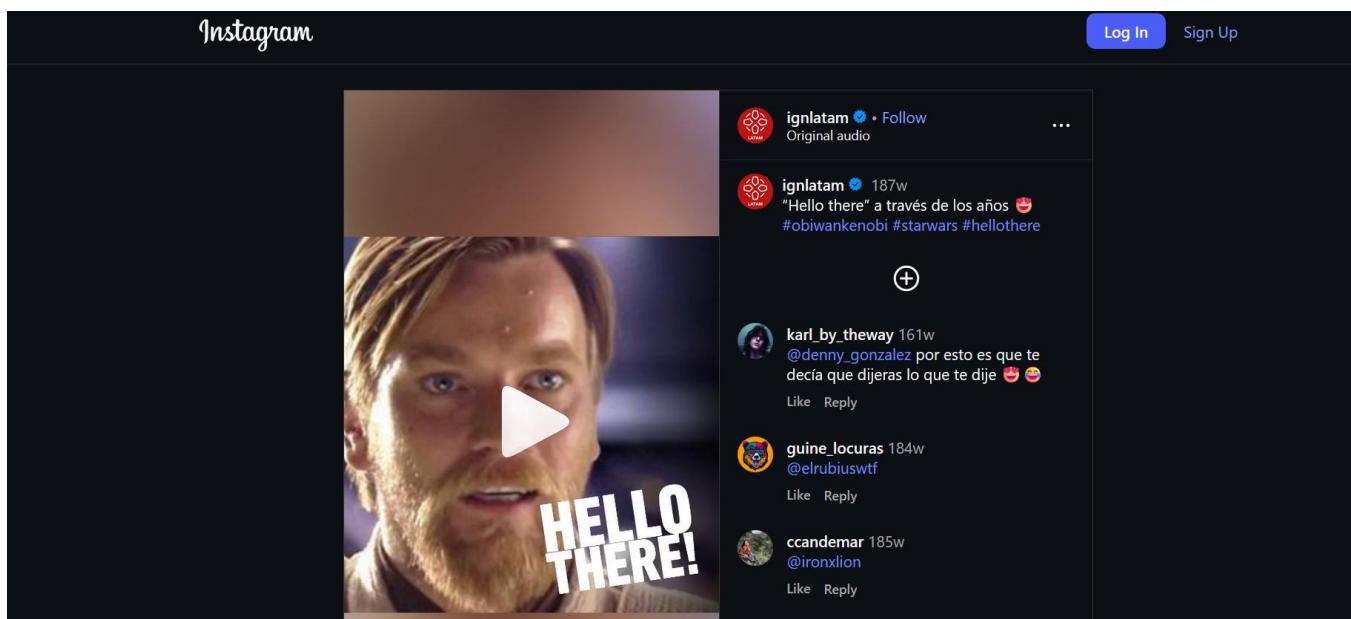

Figure 49: Screenshot of New tab showing Instagram profile successfully opened

Table 3:External Link

| | |
|-----------|---|
| Objective | To verify that external social media links open in a new tab and directing users to the correct external platforms. |
| Action | Click on the Instagram icon in the footer section of any page of EcoMart. |

| | |
|-----------------|--|
| Expected output | Instagram link should open in a new browser tab and navigating to the specified Instagram profile (https://www.instagram.com/reel/CfIEj18pjAz/) |
| Actual Output | Instagram link opened successfully in a new tab and directed to the correct Instagram profile without affecting the current Eco Mart page which is a actual output. |
| Result | External links work correctly, Test Successful. |

3.3 Test-3 Hover Effect

3.3.1 Test-3: Product page (Initial Test case - FAIL)

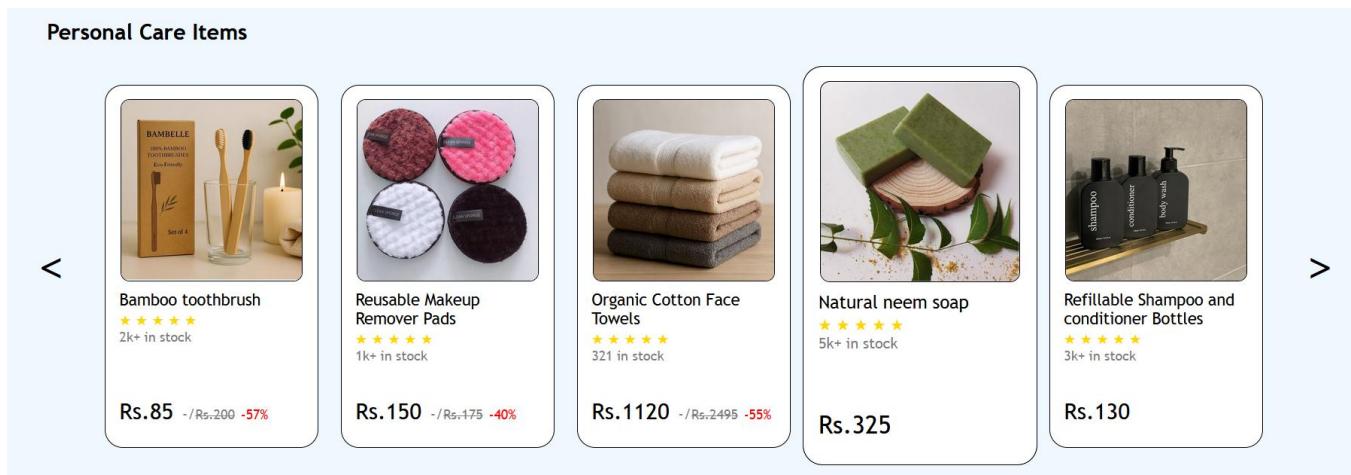

Figure 50: Hover effect fail on fourth image

Table 4: Table of Hover Effect Testing Unsuccessful

| | |
|-----------|--|
| Objective | Verifying product images cycle through multiple images on hover and reverts when mouse leaves. |
| Action | Hover over "Natural neem soap" product card. |

| | |
|-----------------|--|
| Expected output | All Images cycle every 0.5 seconds and revert to original when mouse leave with no lag or glitches. |
| Actual Output | Image remained static. Only 1 image in data-images array, so no cycling occurred when we put the mouse on every product. No revert behavior on mouse when leave. |
| Result | <i>Test was unsuccessful because insufficient image data.</i> |

3.3.2 Test-3: Product page (Final Test case - Passed)

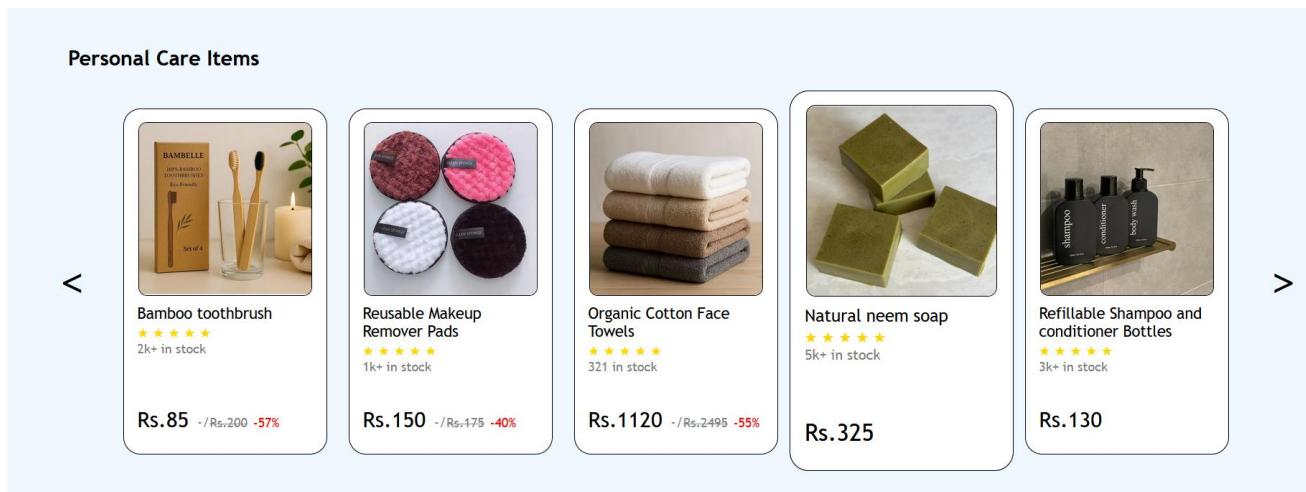

Figure 51: Hover effect Pass on fourth image

Table 5: Hover Effect Testing Successful

| | |
|-----------|---|
| Objective | To verify that product images cycle through multiple images when the user hovers over a product card. |
| Action | Hover the mouse cursor over the "Natural Neem soap" product card on Products page. |

| | |
|-----------------|---|
| Expected Output | The product image should automatically cycle through 3different images (from the data-images array) at 0.5-second intervals while hovering, then return to the original image when the mouse leaves the product card. |
| Actual output | Product images cycled smoothly through all 3 images as expected. Animation started immediately on hovering and stopped when mouse moved away, returning to the original image. |
| Result | Hover effect of the JavaScript functioning correctly. |

3.4 Test-4: Form Validation

3.4.1 Test-4: Form Validation (Initial Test case - FAIL)

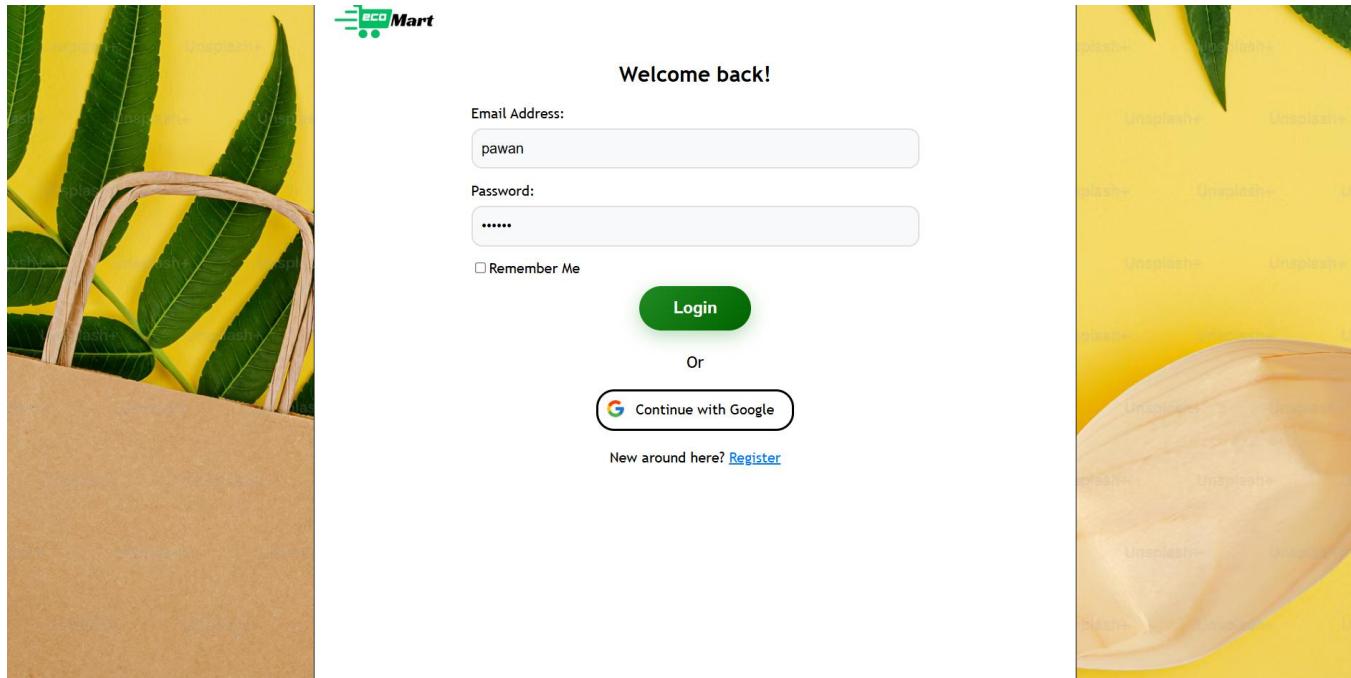

Figure 52:Testing Unsuccessful of the Login Page

Table 6: Table of Login page Testing Unsuccessful

| | |
|-----------------|---|
| Objective | To verify that the login form validates required fields and prevents submission with empty or invalid inputs type. |
| Action | <ol style="list-style-type: none"> 1. Navigating to Login page (Login-EcoMart.html) 2. Leave email field empty and clicks "Login" 3. Enter invalid email "test" and then click "Login". 4. Leave password field empty and click "Login". |
| Expected output | <p>Form should display validation messages and prevent submission for:</p> <ul style="list-style-type: none"> -Empty email: "Please fill out this field" - Invalid email: "Please include an '@' in the email address". - Empty password: "Please fill out this field" <p>this fields are required and mandatory</p> |
| Actual output | <p>Failed case in our login page: Form submitted without any validation. No error messages appeared. Form accepted empty and invalid inputs because; Email field uses input type="text" instead of type="email"</p> <ul style="list-style-type: none"> - Both fields are missing which required attribute for to get the expected output. So the actual and expected output didn't match. |
| Result | Form validation does not work. |

3.4.2 Test-4: Form Validation (Final Test - Passed)

Welcome back!

Email Address:

pawan

Paw ! Please include an '@' in the email address. 'pawan' is missing an '@'.

Figure 54: Login page after testing

Table 7: Form validation Testing Successful

| | |
|-----------|---|
| Objective | Re-verifying form validation after implementing HTML5 validation correct attributes |
| Action | <ol style="list-style-type: none">1. Navigating to Login page (Login-EcoMart.html)2. Leave email field empty and click "Login"3. Enter invalid email "test" and then click "Login".4. Leave password field empty and click "Login" |

| | |
|-----------------|--|
| Expected output | Form should now and must displaying proper validation messages and block invalid submissions which is expected. |
| Actual Output | <p>Test PASSED: All validation working correctly as expected,</p> <ul style="list-style-type: none"> - While type Empty email: Shows "Please fill out this field" - Invalid email type by user : Shows "Please include an '@' in the email address" message is occurred - Empty password: Shows "Please fill out this field" is occurred - Form blocks all invalid submissions which is expected. |
| Result | Test was now successful. |

3.5 Test-5: JavaScript Test 2

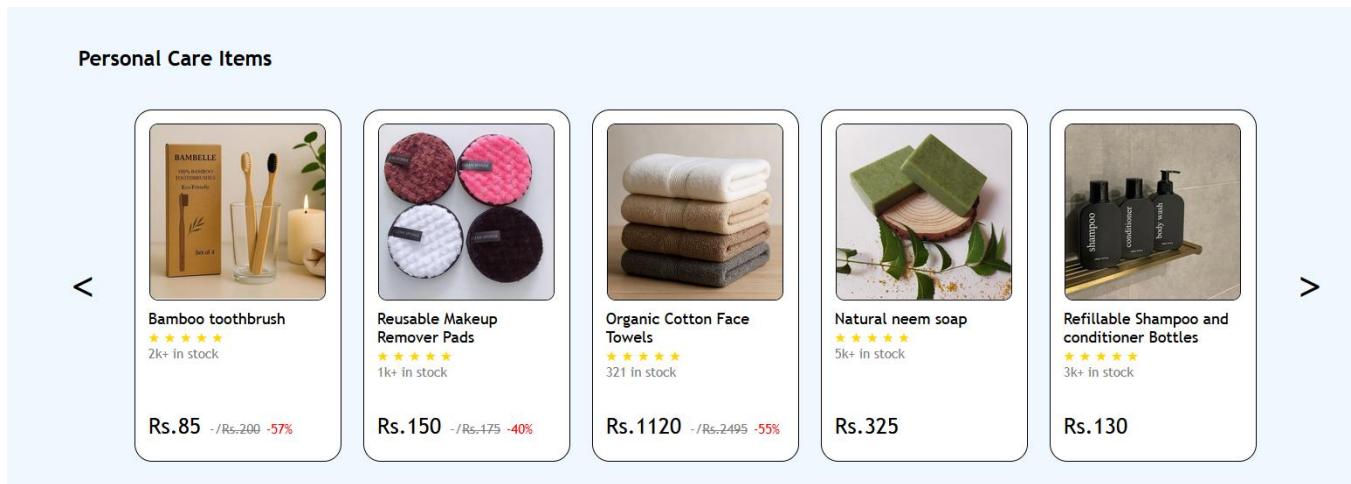

Figure 55: product page before testing

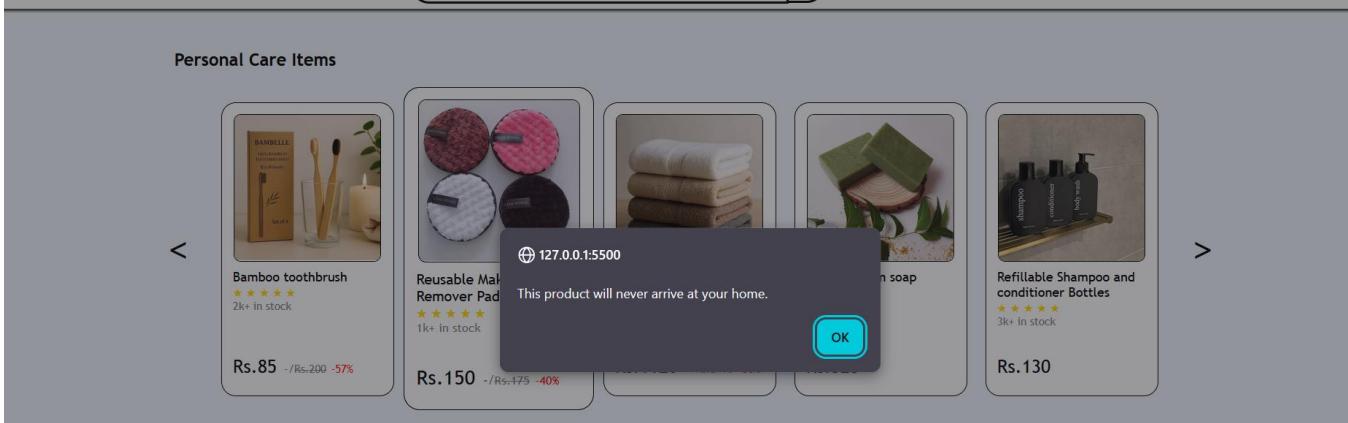

Figure 56:product page after Testing

Table 8: Javascript Test-2

| | |
|-----------------|---|
| Objective | To verify that clicking on a product card triggers a JavaScript alert(pop-up) message. |
| Action | Clicking on any product card (e.g., "Bamboo toothbrush and other products ") on the Products page. |
| Expected Output | An alert box should appear with the alert message: "This product will never arrive at your home." |
| Actual Output | Alert message appeared successfully with the exact expected output when any product card was clicked suddenly the alert message is displayed. |
| Result | Test was successful. |

3.6 Test-6: JavaScript Test 3

We Value Your Feedback

Share your thoughts and help us improve

Your Name

Email Address

Subject

Your Message

Tell us what you think...

Send Feedback

Figure 57: Feedback form before testing

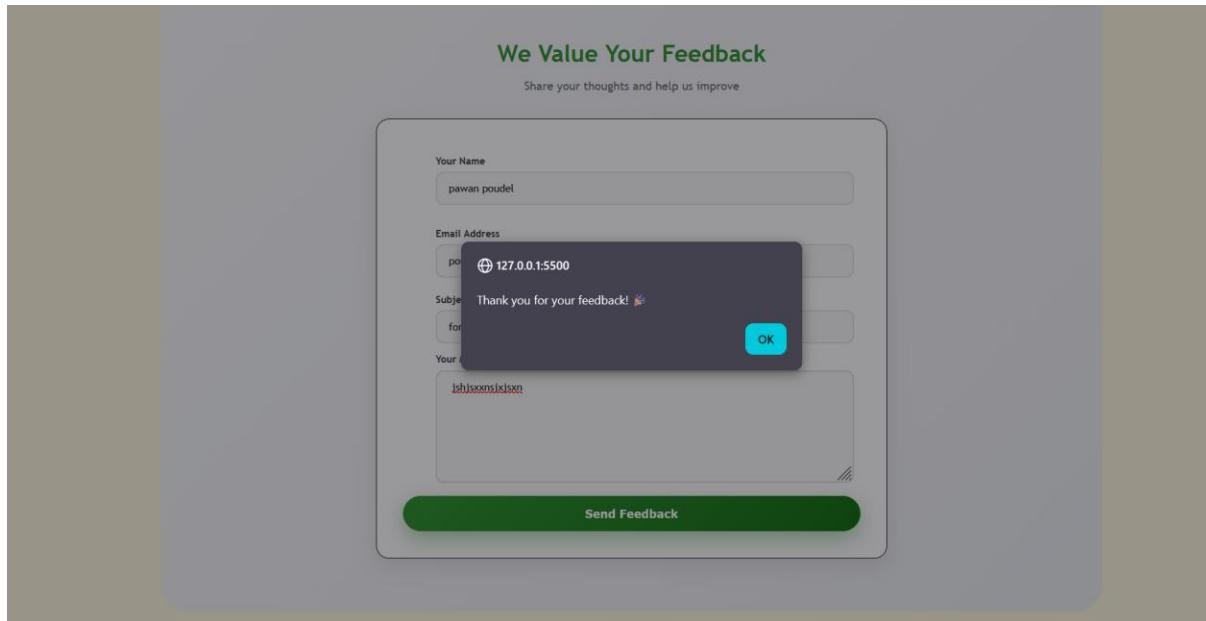

Figure 58: Feedback form after testing

Table 9:JavaScript Test-3

| | |
|-----------------|---|
| Objective | Main objective is to get an alert message "Thank you for your feedback! 🎉" after submitting the feedback form. |
| Action | <ol style="list-style-type: none"> Firstly, Navigate to About Us page (About-EcoMart.html) Secondly, fill in all required fields in the feedback form (Name, Email, Subject, Message as displayed in the feedback form.) Lastly, Click the "Send Feedback" button. |
| Expected output | Clicking submit after filling the form should display a pop-up alert message which says "Thank you for your feedback! 🎉". The form should then reset all fields to empty which is expected. |
| Actual Output | The pop-up message appeared successfully after submitting the form with the text "Thank you for your feedback! 🎉". Form fields were cleared automatically after the alert was dismissed. Expected output and the actual output meets. |
| Result | Finally, test was successful. |

4. Conclusion

4.1 Tasks Completed

EcoMart has been successfully created into a fully functional e-commerce website with nine pages, promoting sustainable products. This project includes all features of the e-commerce website including product listing, individual product pages, cart, wishlist, authentication, blog and research page. A clean and eco-friendly design with hover effects and animations have been implemented using well organized CSS and JavaScript. Engaging elements like carousel, modals, image hover, cart calculations, filtering and validation also have been implemented. Full content has been added, including products, blogs, team members, and research comparisons, using clean, well-organized, and well-structured code for better user experience.

4.2 Research & Findings

Our research included analyzing the best e-commerce sites and eco-friendly online shopping sites to understand the best practices. Through this, we obtained a number of key findings that helped us to develop EcoMart.

1. E-commerce User Experience

We found that the best e-commerce sites focus on easy navigation, proper product categorization, multiple product images, visible product pricing, product availability, discounts. This helps customers shop quickly. We include product category filters, hover image rotation, visible pricing, and product availability but dynamic sorting would need backend implementation.

2. Visual Storytelling & Sustainability

Sustainable brands can reach their users through storytelling, eco-friendly visuals, hero banners, and customer reviews. EcoMart has a hero banner, an “Our Story” section, and a review slider with a consistent green color scheme to emphasize our eco-friendly brand mission.

3. Content Engagement

Engaging users with informative blog content and proper content structure can shine their interest in a brand. Card layouts, modal popups, and conclusion sections can encourage users to engage with content and make it easier to understand. EcoMart has a nine-card blog section with smooth popup and conclusion sections; however, commenting and search features are still pending.

4. Authentication Best Practices

Simplicity and security in authentication forms with options such as social media authentication, a “remember me” checkbox and proper validation can create a good user experience. EcoMart has email/password and Google authentication forms with a nature-themed background. However, authentication backend support is still pending.

5. Team Presentation & Credibility

Interactive team cards and feedback forms can create trust and a humanized brand experience for users. EcoMart has a detailed profile section with information about all team members and a feedback section. However, it does not store feedback data as backend support is pending.

6. Comparative Analysis

From the top sites analysis, the advantages of these sites, such as image hovering, and the areas that need improvement, such as accessibility and responsiveness, were identified.

7. Technical Implementation insights

Proper use of HTML, CSS, layout, and JavaScript with proper commenting makes the code better but the site requires a backend to function properly.

8. Sustainability in Web Development

Good content and green design are good for the environment, but the site still has room for improvement.

9. Collaborative Development Practices

Collaboration with team members, coding style, communication and version control (Github) were important. However, CSS and JavaScript integration were a bit challenging for us.

10. Areas for Future Enhancement

For future enhancements, we will include backend configuration, payment processing, user management, search functionality, responsive design, accessibility, and performance optimization so that we can launch our EcoMart website to the public.

  <h2 style="margin-top: 30px; opacity: 1; z-index: 100;">Our Story</h2><!--Heading for
  the section-->
  <div class="story-text"><!--Container holding the story text-->
    <p>The idea of EcoMart started with a simple question: What if everyday shopping
    could help protect our planet?</p>
    <p>As students learning modern web technologies, we wanted to create something
    meaningful — not just a website, but a vision. EcoMart represents our commitment to
    sustainability, ethical products, and responsible innovation.</p>
    <p>We focus on offering eco-friendly personal care, kitchen, home, and lifestyle
    products that help reduce waste and support a healthier environment.</p>

```

```

<p>Every product, every click, and every choice at EcoMart is a step toward a
greener tomorrow.</p>

```

```

        <p>Eco Mart is built on a simple belief: small choices can create a big impact. We provide eco-friendly, sustainable, and responsibly sourced products that help you live greener without compromising on quality or convenience.

```

```

        Our mission is to reduce everyday environmental harm by offering natural, reusable, and planet-friendly alternatives at fair prices.

```

```

        From households to communities, we aim to inspire conscious living and support a healthier future for generations to come. At Eco Mart, sustainability isn't a trend — it's a responsibility.</p> <!--Paragraph tag for the intro-->

<p>Castile Soap-Natural All-Purpose Cleaner is a versatile, plant-based liquid soap made from saponified vegetable oils like olive oil, and free from synthetic chemicals or animal fats. It excels as a concentrated, eco-friendly alternative for both personal care and household cleaning tasks.</p>

<ul style="margin-top: 30px;">

<li>It can be used for both personal care and household cleaning.</li>
<li>100% biodegradable and sustainable.</li>
<li>Perfect for sensitive skin.</li>
<li>Lathers well when diluted.</li>
<li>Retains glycerin to hydrate skin.</li>

</ul>
